| Semester:             | Subject: Chemistry                |
| Course type: DSC/SLAB | Course Code:                      |
| Course Title:         | <b>Inorganic Chemistry-II Lab</b> |
| MT: 50 (40 + 10)      | Minimum Passing Marks: 20         |
| Grade: B              |                                   |

### List of Practicals

#### Volumetric analysis

- Determination of acetic acid in commercial vinegar using NaOH.
- Determination of alkali content-antacid tablet using HCl.
- Estimation of calcium content in chalk as calcium oxalate by permanganometry.
- Estimation of hardness of water by EDTA.
- Estimation of ferrous & ferric by dichromate method.
- Estimation of copper using thiosulphate.

#### Chromatographic analysis:

Principle involved in chromatographic separations. Paper chromatographic separation of following metal ions: i. Ni (II) and Co (II) ii. Fe (III) and Al (III)

#### Gravimetric analysis:

- Estimation of nickel (II) using Dimethylglyoxime (DMG).
- Estimation of copper as  $\text{CuSCN}$
- Estimation of iron as  $\text{Fe}_2\text{O}_3$  by precipitating iron as  $\text{Fe}(\text{OH})_3$ .
- Estimation of Al (III) by precipitating with oxine and weighing as  $\text{Al}(\text{oxine})_3$  (aluminium - oxinate).
- Estimation of Barium as  $\text{BaSO}_4$

### Heterocyclic Chemistry Lab

Session: 2025-26

Semester: V

Course Type: DSE LAB *5th Lab*

Course Title:

M.M. : 50 - (40 + 10)

*(30 + 20)*

Program: B.Sc.

Subject: Chemistry

Course Code:

**Heterocyclic Chemistry Lab**

Minimum Passing Marks: 20

#### List of Practicals

1. Identification of hetero atoms (S, N, X) in given organic compounds in lab.
2. Identification/separation of simple organic compounds containing hetero atoms using column chromatography/TLC in lab.
3. Spectroscopic identification of simple organic compounds (spectra may be provided to the students and teachers may help the students to identify the compounds using spectra). Melting point/boiling point of the compounds may be checked for its purity.
4. Preparation of : Indigo (using aldol condensation reaction of 2-nitrobenzaldehyde with acetone in basic condition);  
(Depending upon laboratory facilities, more preparation of heterocyclic group of compounds may be incorporated by teacher).

### List of Practicals

1. Free radical solution polymerization of any one: Styrene, methylmethacrylate, methyl acrylate, methacrylic acid (using free radical initiators). (purification of monomer should be taught)
2. Preparation of phenol-formaldehyde resins
3. Emulsion polymerization of polymethylmethacrylate.
4. Use of viscometer for molecular weight determination – (any known polymer, example: polyvinyl pyrrolidone in water/polyacrylamide in NaNO<sub>2</sub> solution) by viscometry. (students should be explained regarding principles and use of ubblohe/ostwald viscometer).
5. Estimation of amount of HCHO in a given solution by sodium bisulphite method.

GOVT. DIGVIJAY AUTONOMOUS P.G. COLLEGE, RAJNANDGAON (C.G.)

B. SC. (Multiple Major) - DIPLOMA COURSE (session 2024-25)

Major - Chemistry

|                     |                                     |
|---------------------|-------------------------------------|
| Session: 2025-26    | Program: B.Sc.                      |
| Semester: V         | Subject: Chemistry                  |
| Course Type: SEC    | Course Code:                        |
| Course Title:       | <b>Green Methods in Chemistry-I</b> |
| Credit: 2           | Lecture: 30                         |
| M.M. : 50 (40 + 10) | Minimum Passing Marks: 40%          |

| Title             | Green Methods in Chemistry-I   |
|-------------------|--|
| Course Objectives | <ul style="list-style-type: none"><li>• To inspire the students about the chemistry which is good for human health and environment.</li><li>• To evaluate suitable technologies for the remediation of hazardous substances.</li><li>• To acquire the knowledge of the twelve principles of green chemistry and how to apply in green synthesis.</li><li>• To make students aware about the benefits of using green chemistry.</li></ul>   |
| Learning Outcomes | <p>By the end of this course, students will be able to:</p> <ul style="list-style-type: none"><li>• Think to design and develop materials and processes that reduce the use and generation of hazardous substances in industry.</li><li>• Get ideas of innovative approaches to environmental and societal challenges.</li><li>• Know how chemicals can have an adverse/potentially damaging effect on human and vegetation.</li><li>• Critically analyse the existing traditional chemical pathways and processes and creatively think about bringing environmentally benign reformations in these protocols.</li><li>• Convert biomass into valuable chemicals through green technologies.</li></ul> |

*Arshi* *RK* *Arshi* *Arshi* *Arshi* *Arshi* *Arshi*

| Units | Lectures | Topics  |
|-------|----------|---|
| I     | 8        | <b>Introduction</b><br>Definition of green chemistry and how it is different from conventional chemistry and environmental chemistry.<br>Need of green chemistry<br>Importance of green chemistry in- daily life, Industries and solving human health problems (four examples each).<br>Twelve principles of Green Chemistry<br>Green Chemistry and Challenges<br>Green Chemistry Awareness Initiative<br>Green Chemistry Challenge Awards<br>Green Chemistry in India<br>Typical Real World Cases of Green Chemistry                           |
| II    | 7        | <b>Renewable Energy Sources</b><br>Introduction<br>Biomass Energy, types of biomass, conversion of biomass, impact on climate and environment<br>Bio-fuels, types, biodiesel, green diesel, biogasoline, biogas, biodigesters<br>Solar Energy, production of thermal and electrical energy, application in daily life, solar cells<br>Wind Energy, resources, production, turbines<br>Hydro power, harnessing the hydro power, disadvantages and limitations, applications<br>Geothermal energy, types, geothermal wells, environmental effects |

|     |   |   |
|-----|---|---|
| III | 8 | <b>Prevention of Chemical Accidents</b><br><b>Hazardous Chemical Symbols and Precautions</b><br><b>Precautions and first aid during Chemical Accidents</b><br>Designing greener processes<br>Inherent safer design and its subdivision : minimization, simplification, substitution, moderation and limitation.<br>Greener alternative to Bhopal Gas Tragedy (safer route to carbaryl) and Flixborough accident (safer route to cyclohexanol) |
| IV  | 7 | <b>Future Trends in Green Chemistry</b><br>Oxidation reagents and Catalysts<br>Biomimetic synthesis with examples of alkaloid tropinone and biocatalysts, multifunctional reagents<br>Combinatorial Green Chemistry<br>Solventless reactions, advantages and limitations, examples such as halogenation, Michael addition, Aldol condensation, Grignard reaction, Reformatsky reaction<br>Green Chemistry in Sustainable Development          |

|                      |   |
|----------------------|---|
| <b>List of Books</b> | <ul style="list-style-type: none"> <li>Anastas, P.T.; Warner, J.C.(1998), Green Chemistry, Theory and Practice, Oxford University Press.</li> <li>Lancaster, M.(2016), Green Chemistry An Introductory Text.2nd Edition, RSC Publishing.</li> <li>Cann, M. C.; Umile, T.P. (2008), Real world cases in Green chemistry Vol 11, American Chemical Society, Washington.</li> <li>Matlack, A.S.(2001), Introduction to Green Chemistry, Marcel Dekker.</li> <li>Ryan, M.A.; Tinnesand, M. (2002), Introduction to Green Chemistry (Ed), American Chemical Society, Washington DC.</li> </ul> |
|----------------------|---|

A collection of handwritten signatures and initials in blue ink, including 'Ashu', 'Alky', 'Spectrum', 'Vandana', and others, some with arrows pointing to specific areas.
